**ANNUAL
CONFERENCE**
*SHAPING CHANGE.
ELEVATING INSIGHT.*
9 OCT 2025

IIA Singapore's Annual Conference 2025 brings together internal audit and GRC professionals to address today's most complex challenges, from emerging technologies to shifting stakeholder expectations.

Gain practical insights on:

• Auditing AI and cyber risks to strengthen trust and resilience in a complex digital world
• Reimagining the Three Lines model in a digital transformation world where the traditional lines are blurring
• Applying behavioural insights to assess leadership tone, ethics, and culture, including critical thinking
• Responding to geopolitical uncertainty with strategic foresight

Earn up to 7.6 CPE hours to support your IIA certifications.

New updates have been added to the conference. Find out more Here.

Navigating Complexity - Driving Trust in a Changing World

Artificial Intelligence (AI)
Dave Enright
Global Head of AI
DKSH

Artificial Intelligence (AI)
Yue Kendall
Vice President, Group Internal Audit
DKSH

Cybersecurity
Dr Matej Drascek
Director of Finance, LON d. d.
and President of IIA-Slovenia

As organisations adopt artificial intelligence (AI) to drive innovation, they simultaneously expose themselves to new, sophisticated cybersecurity threats. Internal audit must rise to the dual challenge of assessing both the governance of AI and the resilience of digital ecosystems.

This two-part session brings together experts to explore the convergence of AI opportunity and cyber risk, and how internal auditors can provide assurance in a world where both the tools and threats are intelligent.

1. **AI & the Future of Internal Audit: Harnessing Intelligence, Managing Risk:** This segment will explore the understanding of AI and machine learning (ML) models, highlighting key risks such as bias, lack of transparency, and potential misuse. Participants will gain insights into emerging AI regulations and their implications for assurance, as well as critical audit checkpoints throughout the AI lifecycle from design and deployment to ongoing monitoring. The session will also outline the tools and skillsets internal auditors need to effectively assess and provide oversight of AI systems.
2. **Cybersecurity in the Age of AI: Evolving Threats and Audit's Role:** This session will examine how AI is being leveraged in both cyber defence mechanisms and increasingly sophisticated cyberattacks, including phishing and deepfakes. It will address the governance challenges posed by AI driven environments and the importance of robust cyber risk frameworks. Explore how internal audit can play a pivotal role in testing cybersecurity controls, evaluating incident response preparedness, and strengthening organisational resilience.
