

**DISCOVER THE SESSIONS ON ESG, CYBERSECURITY, INSIGHTS AND TRENDS  
SHAPING THE FUTURE OF INTERNAL AUDIT**

The internal audit profession is evolving at an increasing rate and we are responding by refreshing the programme for the Annual Conference 2022. We have curated a programme that addresses the most significant challenges that CAEs and internal audit leaders like you face as organisations evolve and transform. Also, we have brought together different stakeholders to widen the perspectives and deepen the discussions.

Grab the opportunity to network with peers inside and outside your industry and connect with solution providers to explore the latest innovations, products and services.

Learn more about the latest programme [here](#).

PayPal

**Panellist**  
**Richard Yeong**  
Head of Technology Audit & Innovation  
Grab

Technology and data now permeate practically all aspects of business and operations, from customer data to intellectual property to HR records, and their use is not just limited to technology and IT companies. The workplace is increasingly a digital environment. The cyber risks inherent in such widespread reliance on technology are profound.

The threat from cyberattacks is significant and continuously evolving. Cybersecurity has grown into one of the most significant risk management challenges facing virtually every type of organisation. A survey in 2021 with CEOs revealed that cyber threats moved to number two on the list of external threats causing concerns for organisations. 90% of business leaders said they are concerned about cyber risks and the impact they could have on their organisations. Is the internal audit function keeping pace with this rapidly changing area of risk?

What are the strategies required to improve cyber resilience to resist cyberattacks? How are organisations preparing themselves? How can we learn from the lessons of others companies to advance cybersecurity?
