How Internal Audit Is Building Trust And Talent Required To Help **Organisations Sustainably Navigate The Future**

Aloysius Fua Partner, Financial Services, Governance, Controls and Regulatory Assurance

Gladys Lee Managing Director, Functional Audit Head **DBS Bank**

Internal auditors need to continuously adapt to the emerging and evolving risk landscapes. In this session, we discuss on three key priorities.

Firstly, environmental, social and governance (ESG). Climate change has become a top priority for financial services, as well as for regulators, governments and society at large. Not a week goes by without another global initiative being launched, a major investor calling for change or a regulator announcing a new focus.

Secondly, management of risks associated with emerging technologies deployed in business and within the internal audit function. Questions are increasingly being asked about how financial institutions manage risks associated with ML and AI, including guarding against the use of biased data and not focusing on compliance risks.

Thirdly, embracing Diversity, Equity and Inclusion in internal audit function. Diverse perspectives, combined with an inclusive culture, drive better decision-making, stimulate innovation, increase organisational agility and strengthen resilience to disruption.
