

A NEW 4TH LINE? EXPLORING THE EVOLUTION OF TRUST

As AI continues to evolve at pace, it is reshaping expectations around governance, oversight, and accountability. This raises important questions about how organisations can continue to build and sustain trust in an increasingly digital world.

At The IIA International Conference, Sophia, the world-renowned humanoid robot developed by Hanson Robotics, will join a fireside conversation to explore the evolving relationship between AI, trust, and assurance.

A New 4th Line? Meet Sophia, The Humanoid: Exploring the Evolution of Trust

As artificial intelligence becomes more embedded in how organisations operate, make decisions, and manage risk, leaders are beginning to ask new questions about trust, oversight, and accountability. Could intelligent systems one day play a role alongside the traditional Three Lines in strengthening governance?

Brad Monterio (EVP, Learning, Licensing, and Sales at IIA Global) sits down with Sophia to examine the future of human and AI collaboration.

From model explainability and human-in-the-loop oversight to the ethical boundaries of machine intelligence, this engaging dialogue will challenge internal audit leaders to think differently about the evolution of trust in an AI-enabled world.

As technology reshapes the landscape of governance and accountability, the conversation invites participants to consider a provocative question: in the future of assurance, could there be a “fourth line”?
